

# Kung Pao Finance Official Whitepaper

## Abstract:

Kung Pao Finance is a decentralized staking platform built on the Binance Smart Chain network. With the Kung Pao Finance platform, users can stake and withdraw rewards on the website using the PAO token, which is available to swap on PancakeSwap.

PAO is a BEP20 standard token with staking, minting, and burning enabled. With its non-decreasing APR, staking rewards remain constant and do not change until the total supply of 10 billion tokens is minted. The smart contract calculates staking rewards every minute and has an annual APR of 375% (i.e., approximately 1% daily). When all coins are minted, staking and associated rewards will cease.

The available supply of PAO increases when rewards are distributed or withdrawn, although there is a hard cap of 10 billion tokens. Staking is calculated by tracking the number of stakeholders, their individual stakes, and their respective rewards. Rewards are calculated every minute depending on the size of the stake and the amount of time spent staking.

The staking rewards calculation is as follows:  $\text{Stake} / 140,000 \times \text{Minutes}$ .

## Specifications:

- Token Name: Kung Pao Token
- Abbreviation: PAO
- Emission rate: 375% APY
- Maximum Supply: 1 billion
- Token Network: BSC
- Token Decimals: 18
- Token Smart Contract: `0x9313eafeF981013c08bc67386AeBD190520EB808`

## Roadmap:

- Create the Kung Pao Finance (PAO) token.
  - Launch the Kung Pao Finance social media presence (e.g., Twitter, Discord, etc.).
  - Create the official Kung Pao Finance website.
  - Add liquidity to PancakeSwap.
  - Update BSCScan.
  - Become listed on CoinMarketCap and CoinGecko.

- Begin implementing influencer marketing.
- Ensure that the PAO token is listed on exchanges.
- Conduct a Certik audit.
- Build a Kung Pao Finance swap interface.
- Implement an NFT interface.

## Tokenomics:

- 10% Team
- 20% Liquidity
- 70% Staking rewards
