

# Kung Pao Finance Official Whitepaper

## Abstract:

Kung Pao Finance is a decentralized staking platform built on the Binance Smart Chain network. The official website is [kungpao.finance](https://kungpao.finance). Users can stake and withdraw rewards on the website using PAO token. PAO is an BEP20 standard token with staking, minting, and burning enabled. PAO token is available to swap on Pancake Swap.

PAO token provides non-decreasing APR. Staking rewards remain constant and do not change until all the coins are minted. The smart contract calculates staking rewards every minute and has an APR of 1% daily or 375% yearly. When all the coins are minted, staking ceases and there will be no more APR or staking rewards. The max supply is 10 billion tokens.

The available supply is increased when rewards are distributed or withdrawn, and has a hard cap of 10 billion tokens. Staking is calculated by tracking the stakeholders, their individual stakes, and their rewards. Rewards are calculated every minute depending on the size of the stake and the amount of time spent staking. The reward calculation is as follows:  $\text{stake} / 140000 * \text{minutes}$ .

## Specifications:

- Token Name: Kung Pao Token
- Abbreviation: PAO
- Emission rate: 375% APY
- Maximum Supply: 1 billion
- Token Network: BSC
- Token Decimals: 18
- Token Smart Contract: `0x9313eafeF981013c08bc67386AeBD190520EB808`

## Roadmap:

- Create token
- Launch social media
- Create website
- Add liquidity to Pancake Swap
- Update BSCScan
- Get listed on CoinMarketCap and CoinGecko
- Influencer marketing
- Get token listed on exchanges
- Certik audit
- Build swap interface
- NFT interface

## Tokenomics:

- 10% Team
- 20% Liquidity
- 70% Staking rewards
